

HomeHero

Project Brief — working title

Client: HomeHero Inc. — an on-demand home-services marketplace startup.

Context

HomeHero wants to launch a marketplace connecting homeowners with vetted local service pros (cleaners, handymen, electricians). Customers book and pay in-app; pros get jobs, navigate to the home, and get paid out. In their words: *“Think Uber for home services, but trustworthy.”*

Who uses it

- **Customers** — browse pros, book + pay, track the pro en route, rate them.
- **Service pros** (mobile, in the field) — accept jobs, see their schedule, navigate, get paid.
- **Ops admins** — oversee pros, payouts, disputes, and marketplace health.

Must have

- Accounts + secure login for customers and pros (pros need ID verification).
- In-app payments: customers pay per job; pros get payouts; the platform takes a cut. Plus a “HomeHero Plus” subscription for frequent customers.
- Live tracking: the customer sees the pro’s location + ETA on a map once a job starts.
- Notifications: booking confirmed, pro on the way, job done, payment receipt.
- A pro dashboard (today’s jobs, earnings, schedule) and an ops dashboard (active jobs, pro utilization, revenue).
- Scheduling: pros set availability; customers book open slots.

The new bits we’re excited about (still fuzzy)

- **Surge pricing** when demand is high. (*How is surge computed — per area? time-based? capped?*)
- **In-app chat** between customers and pros. (*Real-time, or async messages? moderated?*)
- **Photo-based reviews** — customers post before/after photos. (*Who moderates? required or optional? tied to the star rating?*)

Constraints / vibes

- Launch a pilot in one city in about 10 weeks.
- Mobile-first for pros — they’re on phones in the field with spotty connectivity.
- “Reuse what we can — we don’t want to rebuild payments or maps from scratch.”

(No stack specified — open to the team’s recommendation.)
